## Firmenbeschreibung

JOINED helps you locate your friends outdoors – at open-air festivals, crowded events and in other unusual environments. The app not only shows the location of your friends on a map, it also uses sound and vibration to tell you how far away your friends are, and in which direction. After quickly registering with your Facebook ID, you can activate the bearings function by touching the arrow beside your friend's name. Activating Voice-Over on your iPhone makes JOINED fully accessible for users with visual impairments. With JOINED, you also have full control over your own position data, as the native app only ever stores your most recent position. Your previous position is deleted as soon as a position update is received, so no movement profiles are created or stored. Additionally, users can decide if they want to be visible to their friends, allowing them to hide their position at any time.
