#### Описание компании

Books and magazines inform and entertain people through the use of text and images. 3D models show more than just one dimension, allowing the reader to explore objects and enjoy full functionality from any angle. This can contribute to an extraordinary reading experience. reaxios makes it easy to generate 3D models quickly and without complication. It is an augmented reality pipeline enabling ad agencies and companies to create high-resolution animated and interactive 3D models in just one working day. The B2B solution works with iOS mobiles and other hardware. reaxios's next business step will be to extend printed content with interactive 3D graphics.
